Systembench

invitation

Teamwork isn't just a part of our nature, it's also the most efficient way of achieving what we set out to do. Ideas slot together. Just like jigsaw pieces. *invitation* – designed by Mathias Seiler – creates just the right working atmosphere for mastering challenges as a team: communicative, creative and open to everything. The system bench with its modular design allows everyone to have their own space whilst keeping the team together at the same time. Complex knowledge work becomes light-hearted child's play.

Creativity is born from the symbiosis of performance and relaxation.

Phases of concentration follow phases of communication and regeneration. Decide for yourself whether you prefer to work alone, with a neighbour or in smaller or larger groups: *invitation* adapts perfectly to every situation. With maximum flexibility and simple design. The versatile assembly elements can be stored on the cupboards when not in use. Simply and quickly.

Single workstation.

Gather information, answer key questions, let your imagination run away with you: For certain things, you simply need a bit of peace and concentration. Sometimes, you can only make a decision on your own. But the least you can do, is to do this in the relaxed atmosphere offered by *invitation* – at a single workstation which meets any demand. The optional extension desk provides extra storage surface as required.

Double workstation.

The greatest advantage of teamwork: you're never alone. Setting off in search of new ideas is even more fun when there are two of you. Particularly if the surroundings are right. Every thought counts at the *invitation* double workstation, everything is brought to the table. Transparency creates motivation. Mutual inspiration. Absolute creativity.

Long rooms – long tables. Narrow rooms – narrow tables.

The *invitation* single bench is ideal for rooms with limited space. Team exchange is easy over the worktop. Or you can remain undisturbed behind the desk-mounted screen or other extension elements. Whether concentrated or communicative, the organisation rail permits freely moveable monitor arms and mobile storage solutions. At every single workstation.

Modesty panel.

Transparency is good. Opacity is better. Skirts, trousers and legs are discreetly shielded from view by a textile modesty panel.

Flexible teamplayers need variable work surfaces.

Communication and concentration – with *invitation*, the forward-looking working environment, both are possible simultaneously. Screens and the multifunctional rail transform the generously sized conference table into two double workstations quickly and easily. The optional extension desk provides sufficient working surface. This practical small desk enlarges and links up spaces. Communicative in its effect. Restrained in design.

More knowledge, more creativity, more success:

Teamwork provides the perfect opportunity to broaden your horizons. What could be better than a table which offers more space? The *invitation* double bench with table-depth options of 1922 mm, 1690 mm (Fig.) and 1290 mm. The innovative multifunctional rail with the 3rd level concept, desk-mounted screen and flexible storage surfaces ensures optimal comfort.

Cable solutions. Being organised is half the battle; particularly in the office. Creative thinking needs the free space offered by a tidy workstation. All the cables run in orderly channels: a central electricity and data channel. Nothing interrupts the flow of thought.

Multifunctional rail.

Permits freely moveable monitors. The brush section provides sophisticated cable ducting solutions at every point of your workstation.

Storage boxes.

Glide over the cable ducting and socket with ease on a 1922 mm deep double bench.

Integrated power point.

Optimises the conference table – success can be planned, but nothing works without the network and electricity.

Table-top power point.

Work in whatever configuration you want; the mobile socket for the single workstation is always there where you need it.

Cable dump.

Even large quantities of cables can be discreetly concealed beneath the worktop. In a fold-down cable dump at table-depths of 1290 and 1690 mm, in up to three cable dumps at table-depths of 1922 mm.

Meeting square. Rooms, features and media technology need to be economically planned and efficiently organised so people in meetings can perform their best and achieve optimum results together. Boat shaped single tables from the Sedus *invitation* product family are recommended for this.

Meetingpoint.

When *invitation* is at the centre of a discussion, the top requirement for successful communication has already been met.
